SUMMARY

B.Tech Computer Science Engineering graduate (IPS Academy, Indore — 2026), currently an AI/ML Trainee Intern at Technorizen Software Solutions. Strong Python fundamentals (NumPy, Pandas) paired with core NLP theory — tokenization, embeddings, and basic Transformer architecture — from coursework and self-study. Built a Retrieval-Augmented Generation (RAG) assistant using embeddings and vector search to ground LLM answers in source documents, with hands-on prompt engineering to reduce hallucination. Comfortable with Git/GitHub, SQL, and exploring orchestration tools like LangChain. Backed by a portfolio of independent ML and backend projects, and genuinely curious about how Transformers and LLMs work under the hood.

TECHNICAL SKILLS

- **Programming:** Python (primary), NumPy, Pandas, SQL
- **NLP & Transformers:** Tokenization, Embeddings, basic Transformer architecture, Prompt Engineering (academic + applied project work)
- **AI Frameworks:** LangChain (self-study/project use), LLM APIs, RAG pipeline design
- **Vector & Databases:** FAISS (vector search), MySQL, MongoDB, SQLite
- **Machine Learning:** Scikit-learn (familiar), Classification & Regression, Feature Engineering, Model Evaluation
- **Version Control:** Git, GitHub — comfortable with team collaboration workflows

PROJECTS

RAG-Based Document Q&A Assistant | *Python, LLM API, FAISS, Embeddings* — In Progress

- Building a Retrieval-Augmented Generation assistant that answers questions from uploaded documents — chunking and embedding text, running semantic search over a FAISS vector store, and grounding LLM responses in retrieved context.
- Applied prompt engineering techniques to reduce hallucination and keep answers traceable to source documents.

AI-Powered Task Intelligence API | *Python, REST API, MongoDB, JWT* — 2025

- Designed a backend REST API combining rule-based ML scoring for task prioritisation with JWT authentication and role-based access control; tested all endpoints with Postman.

Customer Churn Prediction | *Python, Pandas, Scikit-learn* — 2026

- Built a classification model to predict customer churn from behavioral and usage data, applying data cleaning, feature engineering, and model evaluation.

INTERNSHIP EXPERIENCE

AI/ML Trainee Intern | Technorizen Software Solutions — Aug 2026 – Present

- Gaining hands-on, production-adjacent experience in machine learning workflows, including data preprocessing, model building, and evaluation, as part of a 6-month AI/ML traineeship.

Full-Stack Developer Intern | Amstech Group — May 2025 – Nov 2025 (~7 months)

- Developed Java-based full-stack web applications using Core Java, JDBC, and MySQL; built and tested 10+ REST endpoints; collaborated via Git/GitHub.

Java Developer Intern | Web Dev Technology — Apr 2024 – Jun 2024 (~3 months)

- Developed and debugged Java application modules, resolving 15+ runtime exceptions; applied OOP principles to build structured, maintainable code.

EDUCATION

B.Tech, Computer Science Engineering | IPS Academy (IES), Indore — 2022 – 2026

CERTIFICATIONS

- Oracle AI Foundations Associate
- Java Full Stack Development — Coursera
- Introduction to Databases — Coursera
